Spring 2019 Student Transportation Survey Results

CUPERTINO

Survey History & Purpose

- Cupertino Safe Routes to School has been collecting data on how students travel to and from school since the fall of 2015. This data helps us to better understand citywide student transportation trends across all grade levels.
- This data is collected using an in-class survey. Teachers ask their students how they are traveling to and from school and mark their responses on a Travel Tally Questionnaire that is provided by the National Safe Routes to School Partnership.
- The information that we collect is used to inform program decision making and provide data for grant proposals.
- This report summarizes the findings from our most recent spring 2019 survey.

- 3% increase in walking*
- Highest citywide walking rate
- Highest citywide Alternative Travel rate

Data in this report may not equal 100% due to rounding

*Dramatic Increase in walking rate starting fall 2018 due to change in how school counted walkers. Faria is an alternative school (not a neighborhood school) which draws students from across the district. Students can live as far as 4.5 miles from school. Teachers counted students as walkers if they were driven to the neighborhood and walked from there. Distance students walked is unknown.
